

Basic Performance Test Document

1. Objective

The purpose of this performance test is to assess the speed and responsiveness of key pages and features in the web application under normal load conditions.

2. Tools Used

- Chrome DevTools (Network & Performance tabs)

3. Pages/Modules Tested

- Brands View Page
- Brand Add Page
- Brands Edit Page

4. Key Findings

- Brand View Page: Load time 2 seconds on average
- Brand Add Page: Fast load, all assets under 500ms
- Brand Edit Page: Fast load, all assets under 500ms

6. Conclusion

Overall, the application performs well under normal load. Some minor optimizations can improve user experience and loading speed. No critical performance bottlenecks were identified.
